

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-20 (Canceled).

Claim 21 (Currently Amended): An information storage medium comprising:

a data area configured to store data relating to at least one sequence, wherein said ~~at least~~ one sequence comprises at least one program corresponding to at least one cell; and
a management area configured to store program information for managing said ~~[[at]]~~ ~~least~~ one program and configured to store a play list search pointer table ~~arranged to describe~~ describing information for searching and accessing play lists, wherein,

said play list search pointer table comprises at least one play list search pointer,

said ~~at least one~~ play list search pointer comprises primary text information for identifying ~~at least~~ one program managed by the program information, and

said ~~at least one~~ play list search pointer comprises an item text search pointer number,

wherein said item text search pointer number ~~describes~~ corresponds to an item text search pointer including information indicating a ~~[[text]]~~ size of an item text.

Claim 22 (Currently Amended): A method for recording information on an information storage medium including,

a data area configured to store data relating to at least one sequence, wherein said ~~at least~~ one sequence comprises at least one program corresponding to at least one cell, and

a management area configured to store program information for managing said ~~[[at]]~~ ~~least~~ one program and configured to store a play list search pointer table ~~arranged to describe~~ describing information for searching and accessing play lists, wherein,

said play list search pointer table comprises at least one play list search pointer,

said ~~at least one~~ play list search pointer comprises primary text information for identifying ~~at least one~~ program managed by the program information, and

said ~~at least one~~ play list search pointer comprises an item text search pointer number, wherein said item text search pointer number ~~describes~~ corresponds to an item text search pointer including information indicating a ~~[[text]]~~ size of an item text,

the method comprising:

recording the program information and the play list search pointer table in the management area; and

recording the data relating to the at least one sequence in the data area.

Claim 23 (Currently Amended): A system for recording information on an information storage medium including,

a data area configured to store data relating to at least one sequence, wherein said ~~at least one~~ sequence comprises at least one program corresponding to at least one cell, and

a management area configured to store program information for managing said ~~[[at]]~~ ~~least one~~ program and configured to store a play list search pointer table ~~arranged to describe~~ describing information for searching and accessing play lists, wherein,

said play list search pointer table comprises at least one play list search pointer,

said ~~at least one~~ play list search pointer comprises primary text information for identifying ~~at least one~~ program managed by the program information, and

said ~~at least one~~ play list search pointer comprises an item text search pointer number, wherein said item text search pointer number ~~describes~~ corresponds to an item text search pointer including information indicating a ~~[[text]]~~ size of an item text,

the system comprising:

a first recording unit configured to store the data relating to the at least one sequence in the data area; and

a second recording unit configured to store the program information and the play list search pointer table in the management area.

Claim 24 (Currently Amended): A method for reading information on an information storage medium including,

a data area storing data relating to at least one sequence, wherein said ~~at least one~~ sequence comprises at least one program corresponding to at least one cell, and

a management area storing program information for managing said ~~at least one~~ program and storing a play list search pointer table ~~arranged to describe~~ describing information for searching and accessing play lists, wherein,

said play list search pointer table comprises at least one play list search pointer,

said ~~at least one~~ play list search pointer comprises primary text information for identifying ~~at least one~~ program managed by the program information, and

said ~~at least one~~ play list search pointer comprises an item text search pointer number, wherein said item text search pointer number ~~describes~~ corresponds to an item text search pointer including information indicating a [[text]] size of an item text,

the method comprising:

reproducing the data relating to the at least one sequence from the data area; and

reproducing the program information and the play list search pointer table from the management area.

Claim 25 (Currently Amended): A system for reading information on an information storage medium including,

a data area storing data relating to at least one sequence, wherein said ~~at least one~~ sequence comprises at least one program corresponding to at least one cell, and

a management area storing program information for managing said ~~at least one~~ program and storing a play list search pointer table ~~arranged to describe~~ describing information for searching and accessing play lists, wherein,

said play list search pointer table comprises at least one play list search pointer,

said ~~at least one~~ play list search pointer comprises primary text information for identifying ~~at least one~~ program managed by the program information, and

said ~~at least one~~ play list search pointer comprises an item text search pointer number,

wherein said item text search pointer number ~~describes~~ corresponds to an item text search pointer including information indicating a ~~[[text]]~~ size of an item text,

the system comprising:

a first reproducing unit configured to reproduce the data relating to the at least one sequence from the data area; and

a second reproducing unit configured to reproduce the program information and the play list search pointer table from the management area.

Claim 26 (Currently Amended): An information storage medium comprising:

a data area configured to store data relating to at least one sequence, wherein said ~~at least one~~ sequence comprises at least one program corresponding to at least one cell; and

a management area configured to store program information for managing said ~~[[at]]~~ ~~least one~~ program and configured to store a play list search pointer table ~~arranged to describe~~ describing information for searching and accessing play lists, wherein,

said play list search pointer table comprises at least one play list search pointer,

said ~~at least one~~ play list search pointer comprises primary text information related to ~~at least~~ one of said play lists,

said ~~at least one~~ play list search pointer comprises an item text search pointer number, and

said item text search pointer number ~~describes~~ corresponds to an item text search pointer including information indicating a ~~[[text]]~~ size of an item text.

Claim 27 (Previously Presented): A method for recording information on the information storage medium as defined by claim 26, comprising:

recording the data relating to the at least one sequence in the data area; and

recording the program information and the play list search pointer table in the management area.

Claim 28 (Previously Presented): A system for recording information on the information storage medium as defined by claim 26, comprising:

a first recording unit configured to store the data relating to the at least one sequence in the data area; and

a second recording unit configured to store the program information and the play list search pointer table in the management area.

Claim 29 (Previously Presented): A method for reading information on the information storage medium as defined by claim 26, comprising:

reproducing the program information and the play list search pointer table from the management area; and

reproducing the data relating to the at least one sequence from the data area.

Claim 30 (Previously Presented): A system for reading information on the information storage medium as defined by claim 26, comprising:

a first reproducing unit configured to reproduce the program information and the play list search pointer table from the management area; and

a second reproducing unit configured to reproduce the data relating to the at least one sequence from the data area.
